## BACKGROUND

The Ecology and Environment, Inc. (E & E), Technical Assistance Team was directed by the U.S. Environmental Protection Agency (EPA) to conduct a detailed inventory of warehouses used by the firm Chemical Commodities, Inc., (CCI) of Olathe, Ks. The investigation follows an incident on December 6, 1988 when a CCI truck loaded with ammonium perchlorate was involved in a fire and safety incident in residential Kansas City, Ks. In order to determine if similar dangerous situations exist at other facilities used by CCI, inventories were slated for several warehouses. One such warehouse is CCI's warehouse in Shawnee, Ks. utilized to store various chemicals. This warehouse has been designated as the Shawnee Warehouse and is located at 55th and Woodland in Shawnee, Ks. EPA requested an in-depth inventory of this warehouse beginning December 12, 1988 and ending December 14, 1988.

## SITE DESCRIPTION

Chemical Commodities owns a large warehouse at 20201 W. 55th St., in Shawnee, Ks. Most of this warehouse is leased to King Cabinet, which is a cabinet-making operation owned by Mr. Lloyd King. Overall, the building itself appears to be structurally sound. None of the doors or windows are broken. The overhead garage door opens and closes electrically and works very well. A padlock on the east door secures the Chemical Commodities part of the building and limits access. However, one can gain entry to where the chemicals are stored through King Cabinet. When E & E personnel left the warehouse, the east door was locked and the key was given to the secretary of King Cabinet. If the secretary was not available, access is available through Mr. Lloyd King's nephew.

Also of interest to this site investigation was an outside storage area. This area was located approximately 100 yards directly south of

the east-end of the warehouse. A variety of chemicals were also stored here. A separate inventory was made of this area.

#### SITE ACTIVITY

On December 12, 1988, at 1300 hours, E & E/TAT members Mark Zipf and Ted Hartsig met with John Bosky at the EPA laboratory facility. After being brief on the scope of the work, the E & E team left for the Shawnee Warehouse, arriving at 1420 hours. Hartsig and Zipf were met by Shawnee Fire Department personnel, Jim Farthing (Fire Chief) and Jeff Hudson (Fire Marshall). Mr. Hudson stayed with the E & E team throughout the inventory for that day. The E & E Team began their efforts with the upstairs loft. The E & E team completed the upstairs loft at approximately 1630 hours and left the site at that time.

On December 13, 1988, Mr. Hartsig and Mr. Zipf arrived at the Shawnee site at 0920. The team began to inventory the south shelves and the north shelves. The team broke for lunch at 1150 hours. At this time, the team decided a ladder would be necessary for the upper shelves. They went to the E & E garage and requisitioned a free standing ladder. On returning from lunch, Hartsig continued with the inventory of the south shelves while Zipf finished the north shelves and central shelf area. Hartsig finished the south shelves, the west-end of warehouse and began with the upper shelves. Hartsig and Zipf left the site at approximately 1640 hours.

On December 14, 1988, Mr. Hartsig and Mr. Zipf returned to the Shawnee Warehouse at 0930 hours. Inventory of the central aisle and the northeast corner completed the inventory of the warehouse. Photo documentation was also completed at this time. A total of eight rolls of film were taken over this three-day period.

On December 15 and 16, Mr. Zipf reviewed and categorized information obtained from the inventory. Pictures were reviewed and labeled. A printout of the type of chemical and quantity was typed up (Attachment 1). The printout segregated items to specific areas, i.e., north shelf area, south shelf area, west-end, upstairs loft, central shelf area, and central aisle area.

The following is a brief summary of the work performed by E & E/TAT at the Shawnee Warehouse between December 12, 1988 and December 22, 1988:

- a) Inventory over 500 drums, boxes, bags, cans, and other containers.
- b) List chemicals and approximate quantity by area; approximately 150 different chemicals listed.
- c) Photographed contents of warehouse; 8 rolls of film were shot, a total of 156 pictures.

#### FOLLOWUP

A Chemical Commodities, Shawnee Warehouse, Inventory Report was generated from transcribed log books (See Attachment 2). This report

shows 1) section of warehouse 2) type of container 3) condition of container 4) contents from label 5) comments from label 6) film roll 7) film frame.

Concerning the first item on the inventory, i.e., versaflex-1. The footnote refers to information which is on all the drums of the first 2 listings. This is a rubber stamp reading:

Marion Health and Safety  
1515 Elmwood Road  
Rockford, Ill. 61101

Many of the drums throughout the warehouse had yellow tags with the heading: "Material Identification Tag". Only in a few cases was there any information on these tags. There was space for various types of information on these tags (see picture 8-1).

The photographs have labels on the back describing the site, the roll, the frame, the area of the warehouse, and on some a description of what the picture shows. In some cases, the description of what is shown may not be exact. This is due to the fact that sometimes a picture of a specific drum, bag or package was not taken. In this case, the drum, bag or package was associated with a picture showing the closest area to the drum, bag or package in question.

CHEMICAL COMMODITIES, INCORPORATED  
Olathe, Kansas

SCOPE OF WORK - INVENTORY

- Area To Be Inventoried:
- 1) Main building
  - 2) All out-buildings and trailers
  - 3) Orange trailer beyond fence at rear
  - 4) All containers, drums and tanks in yard

Materials to Be Inventoried:

I. Materials that would be a hazardous waste (ignitable, corrosive, reactive, E P Toxic, "U"-listed and or "P"-listed) if not a product.

II. Materials that would probably have an MSDS required for them.

-Do not need to inventory non-hazardous materials; use judgement, and if in doubt, include material in inventory.

-Do not include containers of less than  $\frac{5}{8}$  gallon in size, unless:

- container is leaking or is badly damaged
- container holds an extremely hazardous material (OR ACUTELY HAZARDOUS)
- small containers stored in large multiples (e.g. 50 8 oz jars)

-Problems to look for during inventory:

- Leaking containers
- Badly damaged and/or corroded containers
- Illegible or no labels
- Spills/residues on floor/ground
- Incompatible materials stored closely together
- Material appears different from what is listed on label
- Material in container that has apparently degenerated, solidified and/or crystalized.

-While conducting inventory, map out locations and document problems with notes and photographs.

III. Materials to be sampled: (CAN LIMIT TO 25 ON A PRIORITY BASIS)

- leaking containers
- badly damaged containers (in imminent danger of beginning to leak)
- spilled materials/residues on floor or around adjacent to stored materials.

CHANGES MADE ON 12/20/88 PER DISCUSSIONS BETWEEN ENSU, WSTM & CNSL
